Professional Summary

Full Stack Developer and B.Sc. Computer Science student with hands-on experience building and deploying role-based web applications end-to-end. Engineered two production-grade platforms featuring secure authentication, multi-role dashboards, and RESTful APIs. Proficient across the **MERN/LAMP stack** with solid exposure to database design, and cybersecurity fundamentals. Seeking backend-focused or full-stack roles where clean system design and secure, scalable code are valued.

Technical Skills

Frontend: HTML5, CSS3, JavaScript, Bootstrap

Backend: Node.js, Express.js, PHP, RESTful API

Databases & Security: MySQL

Tools & Concepts: Git, GitHub, VS Code, XAMPP, Postman | CRUD, API Integration,

Projects

Homestay Booking Platform *Node.js · Express.js · MySQL · JavaScript · HTML/CSS* 2024 – 2025

- Architected a full-stack homestay booking app with three isolated user roles (Guest, Host, Admin), each with dedicated dashboards and permission-scoped REST API access across 15+ protected endpoints.
- Engineered a complete booking lifecycle—room search, reservation requests, host approval/rejection, and real-time availability updates—consolidating all operations into a single, unified platform.
- Secured the application with session-based auth and bcrypt password hashing; designed a normalised MySQL schema across 8+ relational tables with clean Express.js API routes.
- Built a comprehensive Admin Control Panel for managing rooms, bookings, users, media, and reviews, eliminating all direct database operations for non-technical administrators.

Waste Food Management System *PHP · MySQL · JavaScript · HTML/CSS* 2024 – 2025

- Designed and launched a civic-tech donation platform connecting food donors with NGOs, supporting end-to-end workflows from food posting to real-time collection status confirmation.
- Implemented a three-role RBAC model (Donor, NGO, Admin) with purpose-specific dashboards, data isolation, and full audit trails across all donation transactions.
- Engineered MySQL-backed CRUD workflows for posts, users, and NGO records; applied parameterised SQL queries throughout, eliminating SQL injection risks across all form endpoints.
- Delivered a mobile-responsive UI with a donor history dashboard and live NGO food-post feed, replacing phone-based coordination and accelerating donation turnaround.

Education

Sant Rawool Maharaj College, Mumbai University · B.Sc. in Computer Science Sindhudurg, MH 2023 – 2026

Relevant coursework: Data Structures, DBMS, Operating Systems, Computer Networks, Web Technologies, Software Engineering.

Gogte Junior College, Shiroda · Higher Secondary Certificate (HSC) — Science Shiroda, MH 2021 – 2022

Certifications

Foundations of Cybersecurity — Google / Coursera 2025

Cybersecurity Analyst Job Simulation — Tata Group / Forage 2026

Data Analytics Job Simulation — Deloitte / Forage 2026

Technical Support Fundamentals — Google / Coursera 2026

Achievements & Highlights

- Independently designed, developed, and documented two full-stack applications end-to-end—system design, database modelling, API development, and deployment readiness—with zero external mentorship.
- Applied industry-standard security practices (bcrypt, RBAC, session management, parameterised queries) in both projects, demonstrating production-minded habits as an undergraduate.
- Maintained an active GitHub portfolio with consistent commit history, meaningful commit messages, and structured READMEs; completed four industry certifications within a single academic year.
